| 3.4.2. Referenzdioden | 69 |
| 3.5. Kapazitätsdioden | 71 |
| 3.6. Lawinendioden | 76 |
| 4. Kennzeichnungsschlüssel | 77 |
| 5. Anschluß- und Maßbilder | 82 |
| 6. Quellenangaben, Herstellerverzeichnis | 109 |

2. Verzeichnis der verwendeten Symbole

| | |
|-------------|---|
| C | Kapazität |
| C_R | Sperrkapazität |
| C_{tot} | Gesamtkapazität |
| f | Frequenz |
| H | Hersteller |
| I_F | Durchlaßstrom |
| I_{FAV} | Mittlerer Durchlaßstrom (Sinushalbwellen) |
| I_R | Sperrstrom |
| I_{RRM} | Periodischer Spitzensperrstrom |
| I_Z | Z-Strom |
| I_{Ztest} | Z-Strom (Testwert) |
| L | Anschlußdrahtlänge |
| M | Maßbild, Bauform |
| P_{tot} | Gesamtverlustleistung |
| q_C | Kapazitätsverhältnis |
| R_S | Serienwiderstand |
| R_{th} | Wärmewiderstand |
| R_{thjc} | Innerer Wärmewiderstand |
| r_S | Serienwiderstand des Bauelements |
| r_Z | Dynamischer Z-Widerstand |
| TK | Temperaturkoeffizient |
| t_p | Impulslänge |
| t_{rr} | Sperrerrholungszeit |
| U_{BR} | Durchbruchspannung |
| U_F | Durchlaßspannung |
| U_R | Sperrgleichspannung |
| U_{RRM} | Scheitelsperrspannung |
| U_{RWM} | Betriebsscheitelsperrspannung |
| U_Z | Z-Spannung |
| ΔC | Kapazitätsgleichlauf |
| J_a | Umgebungstemperatur (maximale Betriebstemperatur) |
| J_c | Gehäusetemperatur |
| J_j | Sperrschichttemperatur |
| J_L | Temperatur des Anschlußdrahtes |

1. Hinweise zum Datenheft

Das vorliegende Datenheft enthält einen großen Teil der den Amateur interessierenden Dioden aus dem RGW-Sortiment. Wegen der großen Typenzahl ist eine vollständige Darstellung in diesem Rahmen nicht möglich. Bestimmte Diodenarten können deshalb nicht behandelt werden. Außerdem beschränkt sich das Sortiment auf Siliziumbauelemente.

Die Datenübersichten erscheinen in tabellarischer Form. Es werden die jeweils wichtigsten Kenn- und Grenzwerte angegeben. Nicht jede wichtige Angabe findet Platz in den Tabellen. Deshalb verweisen Fußnoten (1. allg. hinter der dazugehörigen Datenangabe) auf weitere Erläuterungen. Sie gelten nur für die Tabelle auf der gleichen Seite.

Die Bauelemente sind innerhalb der Kapitel alphabetisch geordnet. Die jeweils letzten beiden Spalten der Tabellen geben Hersteller (H) und Bauform/Maßbild (M) an. Das Verzeichnis der Hersteller ist in Abschnitt 6 enthalten. Bei den in Abschnitt 5 angegebenen Maßbildern mußten oft Vereinfachungen vorgenommen werden. Bauelementeanschlüsse können verschiedene Ausführungen haben.

Alle Datenangaben beziehen sich auf eine Umgebungstemperatur von 25 °C. Abweichungen davon werden angegeben. Bei vielen Bauelementen aus der UdSSR existieren die Bezeichnungen K... und 2... . Sie werden im Datenheft mit "!" gekennzeichnet. Solche Bauelemente haben gleiche elektrische Daten bei erweitertem Temperaturbereich für die mit 2... bezeichneten Typen.

3. Datenteil

3.1. Gleichrichterdiolen

3.1.1. Heitzgleichrichterdiolen

1) Doppeldiode mit gemeinsamer Katode

2) Diodenzett mit gemeinsamer Katode

3) Dioden werden als Quartette sortiert

4) Gegenüber KV113A und KV113B anderer TX

Hinweis: Typen mit nachgestelltem "1" gibt es als 2Vxxx auch mit erweitertem Temperaturbereich.
